Subject: RE: Glyphosate carcinogenicity status

Hi Kim.

Glyphosate is currently undergoing registration review. EPA plans to publish its preliminary registration review risk assessment for glyphosate for public comment in November 2015, but that may change as we get closer. The glyphosate risk assessment also addresses the recent International Agency for Research on Cancer (IARC) report as part of its carcinogenicity review and classification.

The California Office of Environmental Health Hazard Assessment is currently taking public comment on a Notice of Intent to List glyphosate (and other chemicals) as known to cause cancer under their Safe Drinking Water and Toxic Enforcement Act of 1986 (Proposition 65). Their comment period ends on 10/20/2015. Navigating to this link provides more details (http://oehha.ca.gov/prop65/CRNR_notices/admin_listing/intent_to_list/090415LCset27.html).

Gu Baogen from China (formerly ICAMA, now doing Food Safety work) is here at the

JMPM meeting with me. He's asking about the carcinogenicity status of Glyphosate at EPA and CalDPR. Do either of you have info I can share? He heard that California reclassified it themselves? An email I can forward would be easiest. Thanks!
